## BOAT DECKING HAS A SILVER LINING!

*PlasDECK Releases a Sporty New Silver Metallic Boat Decking Product*

Akron, OH, USA — PlasDECK, Inc., an industry leader of synthetic teak boat decking, has been broadening its color spectrum. The company continues to provide its popular teak-colored decking product, but PlasDECK realizes that the traditional wood look isn't for everyone. The latest color in the PlasDECK spectrum is a bold Silver Metallic with silver planks and black caulk lines. Silver Metallic complements contemporary boat designs or adds new flair to older boats.

Formula Boats has recently completed the installation of PlasDECK's new Silver Metallic boat decking on a unique FX6 350. Formula offers PlasDECK as an option on many models, and typically the synthetic teak decking that you'll see on Formula Boats is the traditional teak color that closely replicates a wooden teak deck. For this particular FX6, Formula made some custom changes to color and theme with a black onyx hull, blue accents, and silver throughout the boat. Silver Metallic PlasDECK proved to be the perfect accent for the swim platform and steps.

The Silver Metallic version is made of the high quality material that boat manufacturers and boat owners expect from PlasDECK, the only synthetic teak boat decking that's made in the U.S.A. All colors of PlasDECK are made of PlasDECK's patented flexible PVC, which contains the best possible ingredients. Low-maintenance PlasDECK will not fade, rot, crack, or crumble, and it's guaranteed to look great for a long time.

If you'd like more information about this topic, or to schedule an interview with Bill Gribble, CEO of PlasTEAK and PlasDECK, please call 1.800.320.1841 or send an e-mail to [Info@PlasDECK.com](mailto:Info@PlasDECK.com).
